The handy tool for installing and using the Particle Toolchain on Linux and macOS.

Easily compile code for Photons, Electrons, Cores and more devices locally and flash code over USB.

Manage your downloaded libraries and link them easily into your local projects.

Install it now using the handy script!

Experience local Particle development as it was meant to be!

```
~/po-util: $ po

                po-util
            https://po-util.com

Copyright (GPL) 2017 Nathan D. Robinson

    Usage: po DEVICE_TYPE COMMAND DEVICE_NAME
           po DFU_COMMAND
           po install [full_install_path]
           po library LIBRARY_COMMAND

    Run "man po" for help.

~/po-util: $
```

bash <(curl -sL https://master.po-util.com/install)
